

## **Assignment 1 Examples – Research Writing Tasks**

The three files in this folder contain four examples for each of the three writing tasks in Assignment 1. These four examples are based on my research published in four journal papers, as follows:

Example 1: Effective use of graphics in web page design

Example 2: Selecting multiattribute decision making methods

Example 3: Sustainable planning of e-waste recycling activities

Example 4: A performance-based approach to project assignment and performance evaluation

The four journal papers used as the four examples for each Research Writing Task in Assignment 1 are contained in the sub-folder titled “Journal Papers Used as Examples for Assignment 1 Research Writing Tasks”.

These examples are meant to give you ideas of what is expected (i.e. what to write and how to write) in the assignment. The paper for each example is given to show you what the research is about. This does not mean that you can select one published paper to do the work.

You should complete these research writing tasks based on your Master’s research project or a research project that you are interested to do. With your selected research project in mind, the examples will help you know what to write and how to write about your research in terms of the writing task requirements.
